

GENERAL DESCRIPTION

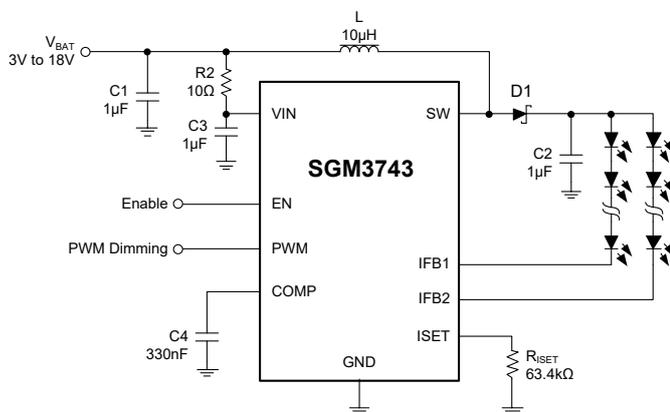

The SGM3743 is a 2-channel white LED driver with high efficiency boost regulator. With an internal 40V/1.5A power MOSFET, it is well suited for smart phone backlight applications powered by 1-cell Li-Ion battery. The supply voltage operates from 3V to 18V.

The boost output has an adaptive voltage regulation with enough low headroom voltage. The SGM3743 is capable of driving up to 10S2P white LEDs while achieving high efficiency. It supports both PWM dimming control and one-wire digital dimming control. A programmable 9-bit brightness code allows for LED brightness control.

The SGM3743 includes a comprehensive set of protection features such as 38.5V over-voltage protection, over-current protection and thermal shutdown. Built-in soft-start circuitry avoids excessive inrush current during startup.

The SGM3743 is available in a Green WLCSP -1.32×1.32-9B package. It operates over an ambient temperature range of -40°C to +85°C.

TYPICAL APPLICATION CIRCUIT

FEATURES

- Input Voltage Range: 3V to 18V
- Support up to 30mA Current per String
- Integrated 40V/1.5A MOSFET
- Up to 90% Efficiency
- Adaptive Boost Regulator
- Switching Frequency: 1.2MHz
- Optimized Rise Time and Fall Time to Reduce EMI on SW Pin
- 1% Regulated LED Current Matching and Accuracy
- Very Low Headroom Voltage: 90mV
- Independent Digital and PWM Dimming Control
- One-Wire Digital Dimming Interface
- PWM Dimming Interface
- Up to 9-Bit Resolution for LED Brightness
- Automatic Soft-Start for Reducing Inrush Current
- Dimming Stable in More than 1:500 PWM Range
- PFM Mode at Light Load
- Support 4.7µH Inductor
- Protection Features
 - ◆ Over-Voltage Protection
 - ◆ LED Open or Short Protection
 - ◆ Thermal Shutdown
- -40°C to +85°C Operating Temperature Range
- Available in a Green WLCSP-1.32×1.32-9B Package

APPLICATIONS

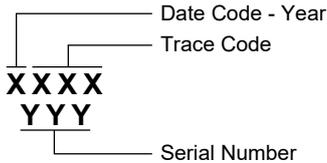

- Smart Phones
- GPS Receivers
- Handheld Devices
- Backlight for Media Form Factor
- LCD Displays with 1-Cell Battery

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

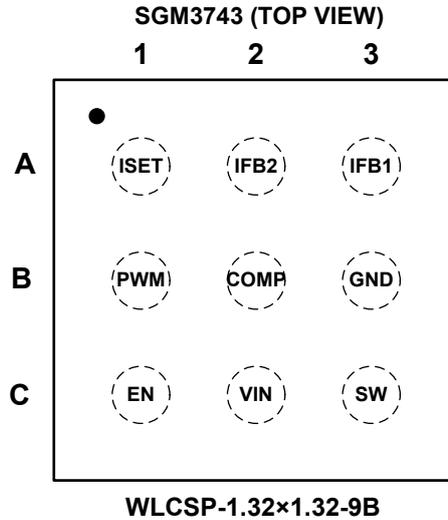

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.

PIN CONFIGURATION

PIN DESCRIPTION

PIN	NAME	I/O	FUNCTION
A1	ISET	I	Current Setting Pin. Connect an external resistor from this pin to ground to set the maximum LED current.
A2	IFB2	I	Regulated Current Sink 2.
A3	IFB1	I	Regulated Current Sink 1.
B1	PWM	I	PWM Dimming Input.
B2	COMP	O	Transconductance Error Amplifier Output. Connect an external capacitor from COMP to ground to compensate the converter.
B3	GND	O	Ground Pin.
C1	EN	I	Enable Control and One-Wire Digital Dimming Input.
C2	VIN	I	Input Supply Pin.
C3	SW	I	Drain Connection for Internal Low-side N-Channel MOSFET.

NOTES:

1. Drive the EN pin low for longer than t_{OW_DET} after t_{OW_DELAY} delay and before t_{OW_WIN} expires, in order to select one-wire digital interface.
2. This condition is only applied when RFA = 1. Use this feature only when the master has an open-drain output and the data line is required to pull high by the master through a pull-up resistor.
