

**SGM4582**

High Voltage, CMOS Analog Multiplexer

GENERAL DESCRIPTION

The SGM4582 is a TTL/CMOS compatible analog multiplexer which consists of two 4-channel multiplexers. It operates from +3.6V to +11V single power supply or $\pm 1.8V$ to $\pm 5.5V$ dual power supplies.

The SGM4582 features high voltage, low on-resistance and low distortion. The high performances make it very suitable for multiple applications, such as cellular phones, audio and video signal routing, etc.

TTL/CMOS logic compatibility can be guaranteed when using a single +5V or dual $\pm 5V$ power supplies because the logic thresholds of all digital inputs are between 0.8V and 2.4V.

The SGM4582 is available in Green SOIC-16, SSOP-16, TSSOP-16 and TQFN-3x3-16L packages. It operates over an ambient temperature range of -40°C to +85°C.

RECOMMENDED OPERATING CONDITIONS

Operating Temperature Range

-40°C to +85°C

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

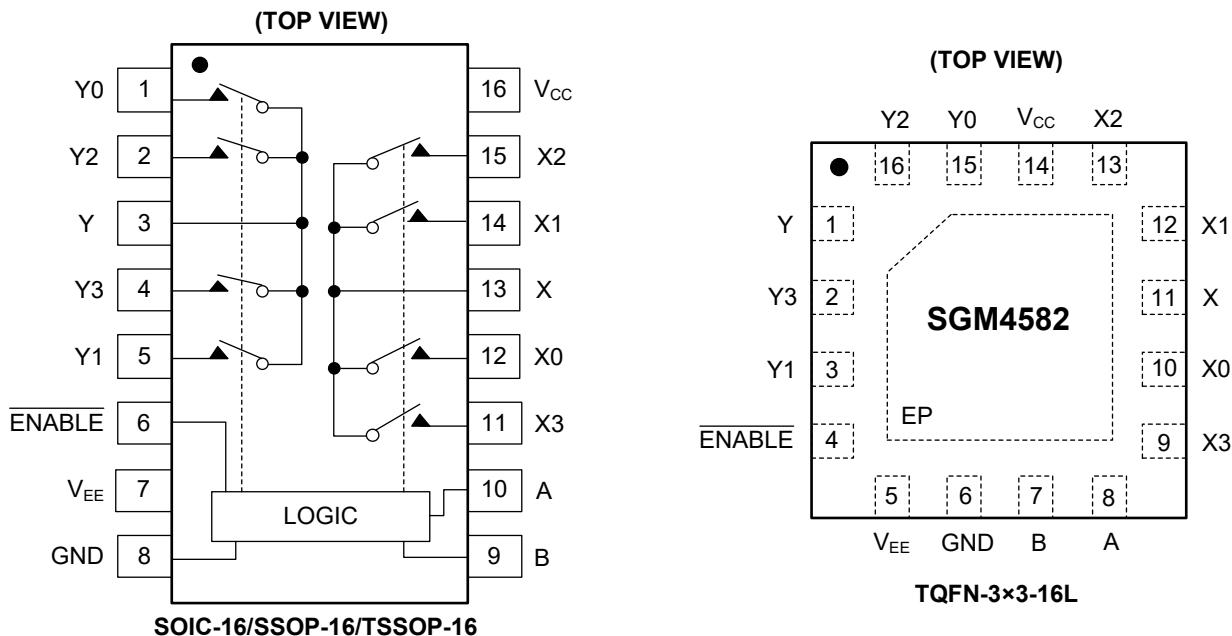

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.

DISCLAIMER

SG Micro Corp reserves the right to make any change in circuit design, or specifications without prior notice.
