

SGM8425/SGM8426/SGM8428 18MHz, High Voltage, Rail-to-Rail I/O Operational Amplifiers

GENERAL DESCRIPTION

The SGM8425 (single), SGM8426 (dual) and SGM8428 (quad) are low power operational amplifiers optimized for high voltage systems. These devices can operate from 4.5V to 30V single supply or from $\pm 2.25V$ to $\pm 15V$ dual power supplies, and each amplifier consumes only 1.6mA quiescent current. They support rail-to-rail input and output operation, which results in wide dynamic range. The SGM8425/6/8 are suitable for low power systems, such as portable and battery-powered applications.

The SGM8425/6/8 have a bandwidth of 18MHz at -3dB. They offer fast settling and slewing times. These devices are well suited for TFT-LCDs.

The SGM8425 is available in Green SOT-23-5, SOIC-8 and MSOP-8 packages. The SGM8426 is available in Green SOIC-8 and MSOP-8 packages. The SGM8428 is available in Green TSSOP-14 and SOIC-14 packages. They are rated over the -40°C to +85°C temperature range.

RECOMMENDED OPERATING CONDITIONS

Operating Temperature Range	-40°C to +85°C
-----------------------------------	----------------

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

ESD SENSITIVITY CAUTION

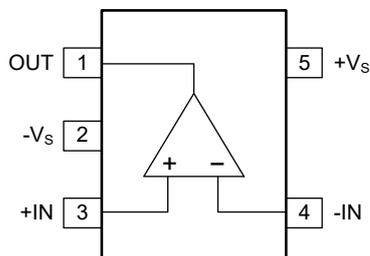

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.
