

GENERAL DESCRIPTION

The SGM3204 is a charge pump voltage inverter that is designed for operating over an input voltage range of 1.4V to 5.5V. The SGM3204 can provide up to 200mA output current. The typical conversion efficiency exceeds 80% over a wide range of output current. The wide supply voltage is well suited for various applications powered by a 1-cell Li-Ion battery, as well as 2-cell or 3-cell NiCd, NiMH or Alkaline batteries.

The shutdown current is less than 1µA. This device requires one flying capacitor and two small bypass capacitors for a complete charge pump inverter, making it ideal for numerous battery-powered and board level applications.

The SGM3204 is available in a Green SOT-23-6 package. It operates over an ambient temperature range of -40°C to +85°C.

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

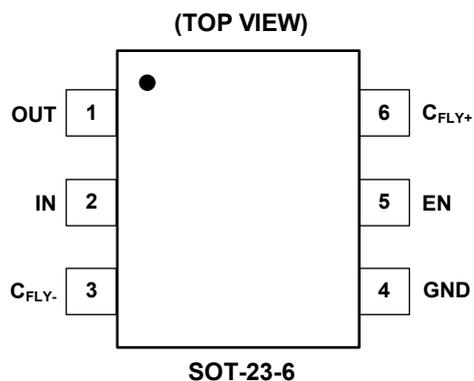

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.

DISCLAIMER

SG Micro Corp reserves the right to make any change in circuit design, or specifications without prior notice.

PIN CONFIGURATION

PIN DESCRIPTION

PIN	NAME	FUNCTION
1	OUT	Power Output Pin. It is recommended that the filter capacitor C_{OUT} bypass OUT to GND.
2	IN	Power Input Pin. A ceramic bypass capacitor that has the same value as the flying capacitor to GND is recommended.
3	C_{FLY-}	Flying Capacitor Negative Terminal.
4	GND	Ground.
5	EN	Enable Control Pin. Logic high to enable normal operation and logic low to shut down chip.
6	C_{FLY+}	Flying Capacitor Positive Terminal.
