

LM324

Quad Rail-to-Rail Output Operational Amplifier

GENERAL DESCRIPTION

The LM324 is a quad, high-gain frequency-compensated operational amplifier, which can operate from 3V to 32V single supply or from $\pm 1.5V$ to $\pm 16V$ dual supplies while consuming only 860 μA quiescent current.

The LM324 features low power, low offset voltage and low bias current. It is well suited for a wide range of applications.

The LM324 is available in a Green SOIC-14 package. It is specified over the 0°C to +70°C temperature range.

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

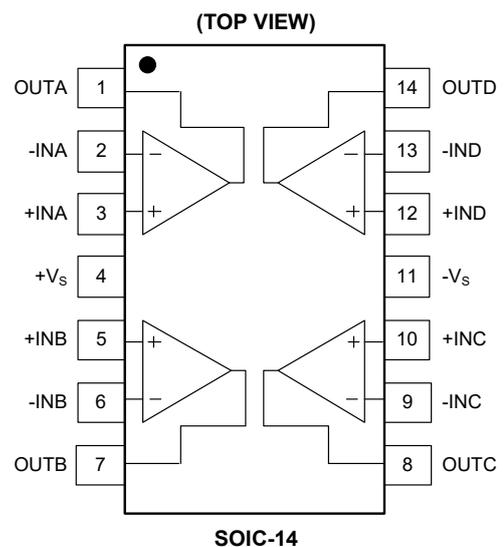

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions. Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.
